U.S. Patent and Trademark Office PTO-326 (Rev. 04-01) Application/Control Number: 09/902,555

Art Unit: 1755

Restriction to one of the following inventions is required under 35 U.S.C. 121:

 Claims 1-6, drawn to a substrate treating composition, classified in class 106, subclass 2.

II. Claims 7-16, drawn to a method of treating a substrate to make it hydrophobic, classified in class 427, subclass 421.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process of using that product, such as a binder.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation between Mr. Pianalto (Examiner) and Mr. Fanucci on 7 January 2003 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-6. Affirmation of this election must be made by applicant in replying to this Office action. Claims 7-16 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

The disclosure is objected to because of the following informalities:

On page 2, line 18, applicants teach the composition can include a "coloring principle". It is unclear what is meant by "coloring principle". Appropriate correction is required.

Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

This claim is indefinite since it is unclear what is meant by "coloring principle".

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Application/Control Number: 09/902,555

Art Unit: 1755

Claim 1 is rejected under 35 U.S.C. 102(e) as being clearly anticipated by Weber et al.

Claim 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Gimvang, JP

51-126,986 or JP 54-28312.

Weber et al, Gimvang and abstracts for the Japanese references all teach a substrate treating solution for imparting hydrophobicity to the substrate comprising an aqueous solution of an alkali metal silicate and an alkali metal alkyl siliconate. The claimed composition reads upon that taught.

Claims 1 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Patel.

This reference teaches a substrate treating solution for imparting hydrophobicity to the substrate comprising an aqueous solution of an alkali metal silicate and an alkali metal alkyl siliconate. Column 4, line 6 teaches the composition can also contain a pigment or a biocide. A biocide is an agrochemical principle, since the biocide for this composition are those which kill substrate damaging organisms, such as mold, algae or mildew. The claimed composition reads upon that taught.

Claims 1 and 5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Brown.

This reference teaches a substrate treating solution for imparting hydrophobicity to the substrate comprising an aqueous solution of an alkali metal silicate and an alkali metal alkyl siliconate. Run numbers 7-9 teach aqueous compositions containing 1.25 wt% sodium silicate and 0.25 wt% sodium methyl siliconate; 2.5 wt% sodium silicate and 0.5 wt% sodium methyl siliconate and 5 wt% sodium silicate and 1 wt% sodium methyl siliconate. The composition falls within the claimed range. The claimed composition reads upon that taught.

- Art Unit: 1755

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over JP 51-126,986.

As stated above, this reference teaches the claimed composition. The abstract for JP 51-126986 teaches the composition comprises 2-9 wt% of a mixture of sodium and potassium silicate and greater than 0.5 wt% sodium methyl siliconate. These amounts overlap the claimed ranges. Product claims with numerical ranges which overlap prior art ranges were held to have been obvious under 35 USC 103. *In re Wertheim* 191 USPQ 90 (CCPA 1976); *In re Malagari* 182 USPQ 549 (CCPA 1974); *In re Fields* 134 USPQ 242 (CCPA 1962); *In re Nehrenberg* 126 USPQ 383 (CCPA 1960). The reference suggests the claimed composition.

Claims 2-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown.

As stated above, this reference teaches the claimed composition. Column 5, lines 40-55 teach the composition contains 0.1-10 wt% siliconate and 0.1-30 wt% silicate. These amounts overlap the claimed ranges. Product claims with numerical ranges which overlap prior art ranges were held to have been obvious under 35 USC 103. *In re Wertheim* 191 USPQ 90 (CCPA 1976); *In re Malagari* 182 USPQ 549 (CCPA 1974); *In re Fields* 134 USPQ 242 (CCPA 1962); *In re Nehrenberg* 126 USPQ 383 (CCPA 1960). Since the weight percentages overlap, one of ordinary skill in the art would be expect the molar ratios to also overlap, absent any showing to the contrary. The reference suggests the claimed composition.

Application/Control Number: 09/902,555

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melissa Koslow whose telephone number is (703) 308-3817. The examiner can normally be reached on Monday-Friday from 8:00 AM to 3:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Mark Bell, can be reached at (703) 308-3823.

The fax number for Amendments filed under 37 CFR 1.116 or After Final communications is (703) 872-9311. The fax number for all other official communications is (703) 872-9310.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-0661 or (703) 308-0662.
